If your home's sewer line suddenly becomes blocked, is this your only backup plan?

What would you do

if you were suddenly faced with a backed up sewer line in your home?

Who would you call?

How much would it cost?

How long would it take to repair?

Every homeowner who's been through this ordeal can tell you about the headache, the inconvenience, and the substantial expense that's involved. Sewer line repairs are not covered by most homeowners insurance.*

The good news

is that there's a new way to protect your peace of mind and your pocketbook in the event of a sewer line emergency in your household.

Now you can receive expert emergency response with just a single phone call...and all for just pennies a day!

*Homeowners should check their homeowners insurance policy to determine whether it covers repairs of their sewer line.

It's Your Responsibility

You may not realize that as a homeowner, you own and are responsible for the maintenance and repair of the sewer line that connects your home to the city's sewer main in the street.

A Homeowner's Nightmare

Over time, unpreventable conditions such as strangling tree roots, uneven ground settling, the pipe's age and material – even general wear and tear – can cause your sewer line to become blocked or collapse.

A Typical Home's Drain and Waste System

The sewer line begins in your basement, where it is a collection point for all the other drains throughout your home. It then continues outside, four to ten feet underground and extending the entire length of your property, up to where it meets your municipality-owned sewer main in the street.

If your sewer line should back up or collapse, you normally would have to:

- 1) Hire a plumber to investigate the problem and attempt to unblock the main sewer drain in your home.
- 2) If the plumber determines that the blockage or collapse of your line is so severe that further action is required, you would have to hire a contractor to excavate your property and complete the repair or replacement of the line from the point of failure to the point of free flow.
- 3) Finally, in the area of the excavation, you would need to have your lawn or driveway restored to its original condition.

If you're not protected by the Safety Valve Sewer Line Protection Plan, these steps could cost you up to \$5,000...or more.

The Safety Valve Alternative

With the Safety Valve Sewer Line Protection Plan, you gain peace of mind knowing that if something should go wrong with your sewer line, you're covered.

Check Out The Benefits

- A single phone call to a single source to coordinate all phases of the covered repair
- Initial emergency response by a pre-qualified plumber to investigate the blockage and make any covered repairs that do not require excavation
- Expert covered repairs by pre-qualified plumbers and contractors
- Big Savings

Please see the enclosed enrollment form for Safety Valve Sewer Line Protection Plan pricing.

Refer to the enclosed service agreement for a detailed description of the Safety Valve Sewer Line Protection Plan.

Coverage begins 30 days after receipt of your payment. Simply complete and return the enclosed enrollment form or enroll by phone with a MasterCard or Visa.

- Initial service call to investigate the source of your equipment failure and unblock the main sewer drain inside your home
- Repair of the collapsed sewer line, if necessary, from the point of failure to the point of free flow
- Complete sewer line replacement, if necessary, from your home to the connection in the street
- Excavation costs
- Loaming and lawn reseeding, driveway repaving and sidewalk replacement in the area of excavation
- Parts, labor and materials for indoor and outdoor repairs
- Any required inspection fees
- Up to \$5,000 annually and per incident

Here's What's Covered
